Installer

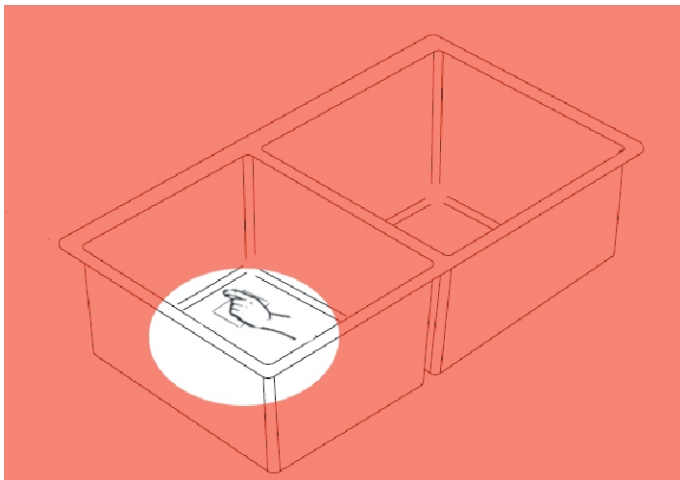

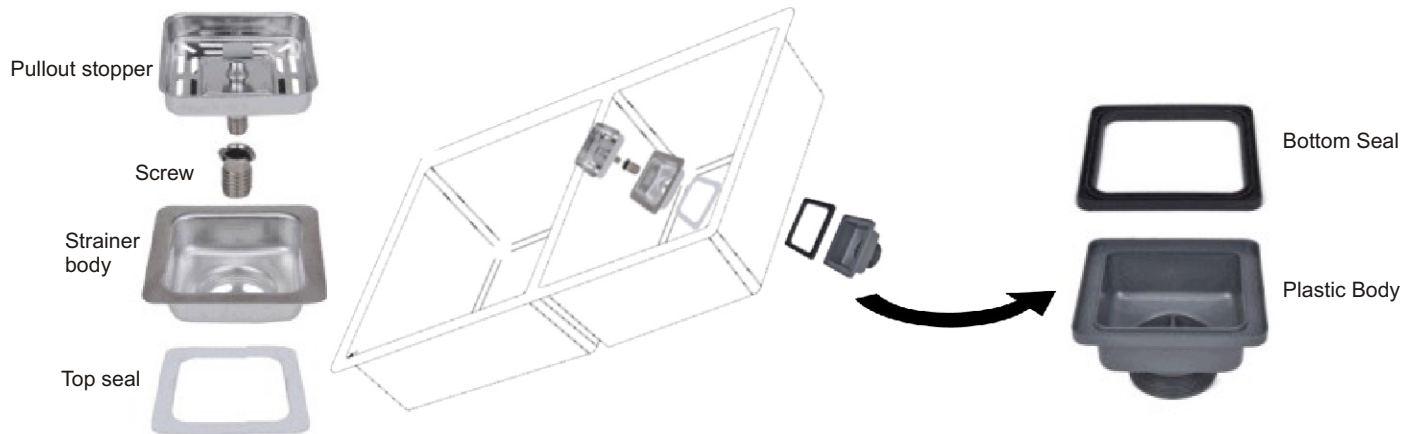

Please leave this leaflet with the home owner/user, as it contains valuable after care advice.

Notes

Undermount sinks should only be installed to stone worktops by a specialist installer.

Square Strainer INSTALLATION

Insert the metal strainer with the rubber seal into the drain hole. Position the plastic bowl end the rubber gasket underneath the drain hole. Using a flat-head screw driver, turns the locking nut to tighten the metal strainer to the plastic bowl.

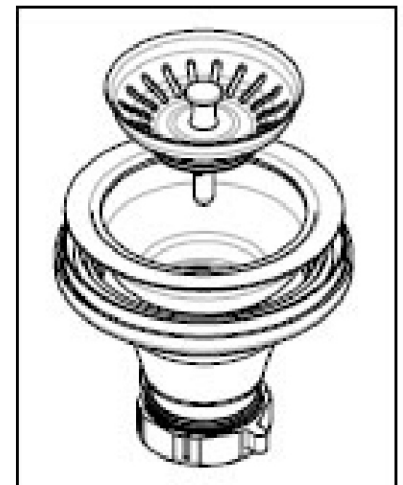

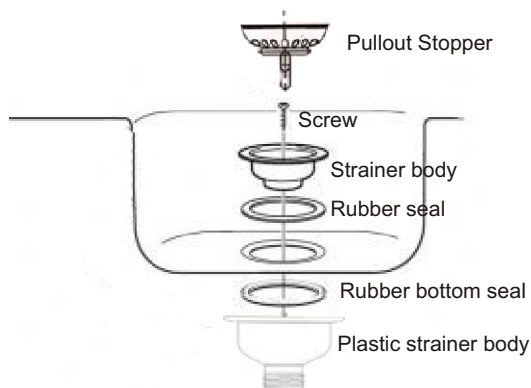

TIP

Have a partner lean over the sink and firmly press the strainer area **DOWN** while the other person tightens the tail piece underneath the sink.

Connect tailpiece to strainer with slip nut.
(Apply glue if necessary)
Tighten to strainer while the other person pressing down from above.

Round Strainer INSTALLATION

Sink Specification (All Models)

Care & Maintenance

Castle Bay stainless steel sink is easy to keep clean. Simple everyday maintenance will ensure its long lasting beauty.

WHAT TO DO

For regular routine cleaning, use a non-abrasive cleaner. This will keep the sink free from residue and grease. The best form of maintenance is frequent, regular cleaning. Regularly rinse and towel dry your sink with a soft, dry cloth when not in use to keep it dry. This will prevent surface/mineral deposits and water spots caused by lime in the water.

WHAT NOT TO DO

Do not use common steel wool scouring pads or metal implements such as scrapers and wire brushes. These items can cause rust spots to appear on the sink. The rust is not from the stainless steel but from contamination by particles of carbon steel which have rubbed off the scouring pad or metal implement and have adhered to the surface of the sink.

SCRATCHES

Like many metallic surfaces, your stainless steel sink will scratch. Overtime, these scratches will blend into the overall finish of your sink and will become uniform with the sink's grain. For this same reason, a 10 years old sink may look less scratchy than the newly installed sink.

SURFACE RUST & STAINS

Stainless steel does not rust. Rust are a result of iron particles, from outside sources such as water, cookware, steel wool pads, etc, that eventually develop into rust spots. We recommend to use BAKING SODA mixed with vinegar to wipe off these spots.

WATER QUALITY

The quality of water can affect your sink's appearance. If your water has a high iron content, a brown surface stain can form on the sink giving the appearance of rust. Thus, we suggest that the sink be towel dried after each use, and be cleaned with a recommended cleanser.
